Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary		Application	Application No. Applicant(s)			
		09/824,79	92	CHOU, HUIL-ING		
		Examine		Art Unit		
			Safaipour	2622		
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6-11, 13-18 and 20 rejected under 35 U.S.C. 102(b) as being anticipated by Tomohisa et al. (U.S. Patent No. 4,712,141).

Regarding claim 1, Tomohisa et al discloses a method for increasing scan resolution without varying hardware specification, said method comprising the steps of: obtaining a data quantum based on an indicated scan range and an indicated scan resolution; when said data quantum is higher than a threshold of scanner hardware, generating a scanned image of said indicated scan range by using a highest resolution provided by an image sensor; and performing an interpolation to said scanned image for increasing resolution of said scanned image to said indicated scan resolution (col. 4, lines 3-9 and col. 17, line 19 through col. 18 line 60).

Regarding claim 2, Tomohisa et al discloses the method according to claim 1, further comprising a step of performing a scan operation to said indicated scan range when said data quantum is not higher than said threshold (col. 4, lines 3-9 and col. 17, line 19 through col. 18 line 60).

Regarding claim 3, Tomohisa et al discloses the method according to claim 1, said data quantum being determined by using said highest resolution provided by said image sensor, bytes for color illustrations to each pixel, and said indicated scan range (col. 18, lines 4-60).

Art Unit: 2622

Regarding claim 4, Tomohisa et al discloses the method according to claim 1, said image sensor being a charge coupled device, a contact image sensor, or a CMOS sensor (col. 2 lines 24-31).

Regarding claim 6, Tomohisa et al discloses the method according to claim 1, further comprising a pre-scan step for generating a pre-scan image of a document sheet used for selections to said indicated scan range and said indicated scan resolution (col. 4, lines 3-9 and col. 17, line 19 through col. 18 line 60).

Regarding claims 7, 8, 14 and 15, arguments analogous to those presented for claim 1 are applicable to claims 7, 8, 14 and 15.

Regarding claims 9 and 16, arguments analogous to those presented for claim 2 are applicable to claims 9 and 16.

Regarding claims 10 and 17, arguments analogous to those presented for claim 3 are applicable to claims 10 and 17.

Regarding claims 11 and 18, arguments analogous to those presented for claim 4 are applicable to claims 11 and 18.

Regarding claims 12 and 19, arguments analogous to those presented for claim 5 are applicable to claims 12 and 19.

Regarding claims 13 and 20, arguments analogous to those presented for claim 6 are applicable to claims 13 and 20.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2622

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5, 12 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomohisa et al. (U.S. Patent No. 4,712,141) and further in view of Applicant's Admitted Prior Art (AAPA).

Regarding claims 5, 12 and 19 Tomohisa et al. does not explicitly disclose performing interpolation by using bilinear or bicubic algorithm, however, as admitted by the applicant (page-6, lines 1-3), these are conventional methods and are utilized in the art for interpolation.

Therefore, it would have been obvious to a person of an ordinary skill in the art at the time the invention was made to include these types of algorithm in Tomohisa's interpolation procedures.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Houshang Safaipour whose telephone number is (703)306-4037. The examiner can normally be reached on Mon.-Thurs, from 6:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward L Coles, Sr. can be reached on (703)305-4712. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
